

## Co·lor in the clouds

Some·time<sup>s</sup>, the sky is full of fluf·fy white clouds. But some·time<sup>s</sup>, clouds look black. Some·time<sup>s</sup>, they look pink. Where doe<sup>s</sup> the co·lor come from?

clouds are made of drops of wa·ter or ice. But the drops of wa·ter in the clouds are not pink or red or orange. It is the sun that make<sup>s</sup> the co·lor<sup>s</sup> in the clouds. Sun·shine chan·ge<sup>s</sup> co·lor a<sup>s</sup> it goe<sup>s</sup> through the drops of wa·ter in the clouds.

clouds look dark be·cau<sup>se</sup> they are so thick. Bil·lions of drops of wa·ter make a cloud. Ver·y lit·tle sun·shine can come through. Dust al·so make<sup>s</sup> clouds dark. Dust from the ground blow<sup>s</sup> in·to the sky and be·come<sup>s</sup> part<sup>s</sup> of the clouds.

The shapes and co·lor<sup>s</sup> of the clouds tell a·bout the wea·ther.
